## DETAILED ACTION

### *Claim Objections*

Claim 1 is objected to because of the following informalities: line 4, "layer." should be --layer;--. Appropriate correction is required.

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yamaguchi et al. (USPN 6,118,152) in view of Iida et al. (USPN 5,747,846).

Yamaguchi et al. discloses a semiconductor device (Fig. 1) comprising an SOI substrate having a structure in which a semiconductor substrate 1, an insulating layer 3 and a semiconductor layer (8, 4) are layered in this order; a partial isolation insulating film (13a) formed in a main surface of said semiconductor layer; a first semiconductor element (transistor Q1) formed in an element formation region defined by said partial isolation insulating film in said semiconductor layer; a ground line 19a; and a first complete isolation insulating film 6 formed throughout a portion below said ground line. Yamaguchi et al. does not explicitly disclose an interlayer insulating film formed on said first semiconductor element and said partial isolation insulating film. However, it is old and well known in the art as disclosed by Iida et al. to form an interlayer

Art Unit: 2811

insulating film on the first semiconductor element and the partial isolation insulating film before forming the ground line 19a so that the interlayer insulating film acts as a protection layer covering the transistor Q1 and isolating the gate electrode from being short with the ground line 19a and preventing the gate electrode and the semiconductor layer from being exposed and contaminated with impurities during the fabrication process. Iida et al. discloses an interlayer insulating film 19 formed on a first semiconductor element (Transistor Ts) and a partial isolation insulating film 8. Therefore, forming the conventional feature, an interlayer insulating film on the first semiconductor element and the partial isolation film as a protection insulating layer would have been obvious modification.

### ***Response to Arguments***

Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory

Art Unit: 2811

period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
